

Part I - Dialogue assessment items

Assessment Item 1 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

If the dataset had been manipulated, the anomaly detector would have spiked.

Right 1

Possibly, though a detector spike can come from other disruptions too.

Left 2

It did spike last night.

Right 2

That certainly means something unusual happened.

Left 3

Then the dataset was manipulated.

Right 3

A spike narrows the field, but it does not name the culprit by itself.

Assessment Item 2 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

If the Arctic grant is renewed, the field season goes ahead.

Right 1

Right, that would guarantee the trip.

Left 2

The grant was not renewed.

Right 2

So that route is closed.

Left 3

Then the field season cannot go ahead.

Right 3

Losing that grant hurts, but why think every other route is closed too?

Left 1

Either the leak came from legal or from procurement.

Right 1

Those are two live possibilities, yes.

Left 2

Procurement definitely had access to the draft.

Right 2

That keeps procurement in the running.

Left 3

Then it wasn't legal.

Right 3

Why assume those two possibilities could not both be part of the story?

Left 1

All tenure files are reviewed by the dean.

Right 1

Naturally.

Left 2

This fellowship dossier was reviewed by the dean yesterday.

Right 2

Yes, it was.

Left 3

Then it must be a tenure file.

Right 3

A dean reviews lots of things; why treat that as a unique fingerprint?

Left 1

If the archival script reran overnight, the timestamps would bunch together.

Right 1

That would be one way to get clustering.

Left 2

The timestamps are bunched together.

Right 2

So the log definitely changed somehow.

Left 3

Then the archival script reran overnight.

Right 3

Clustered timestamps tell us something happened, but why leap straight to that script?

Left 1

The anonymous reviewer who attacked your method clearly misunderstood the archive.

Right 1

Maybe, though we still do not know who that reviewer was.

Left 2

You know Professor Hale, and Hale understands the archive extremely well.

Right 2

I agree with that much.

Left 3

So Hale could not have been the anonymous reviewer.

Right 3

Knowing Hale that way still does not tell us who was behind the anonymous review.

Left 1

The initiative is clearly working; look at the jump in enrollment in March and April.

Right 1

Why only those two months rather than the whole year?

Left 2

Because those are the months after the rollout, and they show the effect cleanly.

Right 2

They also sit inside a year that otherwise trends downward.

Left 3

The important point is that the rollout produced two excellent quarters of evidence.

Right 3

Before we call it a recovery, should we not look at the quarters you left out?

Part I - Dialogue assessment items

Assessment Item 14 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

Two students in my section cheated during remote exams, so remote testing is inherently dishonest.

Right 1

That seems broader than the sample can support.

Left 2

It shows what the format invites once students are out of sight.

Right 2

It may show a real risk, but not what every remote exam amounts to.

Left 3

After seeing those two cases, I do not see why anyone would trust the whole format.

Right 3

Two ugly cases are not yet the same thing as a broad pattern.

Part I - Dialogue assessment items

Assessment Item 15 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

Editing a paragraph after peer review and fabricating a dataset are basically the same sort of dishonesty; both involve changing the record.

Right 1

Both involve change, but not remotely at the same level.

Left 2

A manipulation is still a manipulation.

Right 2

That description is too thin to carry the equivalence you are claiming.

Left 3

Once you alter the text, the ethical line has already been crossed in the same way.

Right 3

A hospital and a household budget may rhyme in one respect, but do they work the same way where it matters?

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
--------------------------------------	--	--	---	---------------------------------------

Part I - Dialogue assessment items

Assessment Item 16 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The union representative only called the report unsafe because she wanted leverage before bargaining.

Right 1

That incentive might be worth keeping in mind, but what about the ventilation data she cited?

Left 2

People do not raise these alarms unless there is something to gain from them.

Right 2

Sometimes they do, but that still would not answer whether the data are sound.

Left 3

I think the bargaining motive tells us enough about how seriously to take the report.

Right 3

Possible incentives are worth noting, but what do they show about the report's actual case?

Mark one choice:

☐

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 17 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The consultant's undisclosed financial tie does not automatically refute the report, but it does mean we should verify the claims independently.

Right 1

That seems fair; the conflict affects how much trust we extend before checking the evidence.

Left 2

Exactly. I am not saying the report is false, only that the burden of independent confirmation is now higher.

Right 2

Then the relevant question becomes whether the numbers still hold once we audit them ourselves.

Left 3

Yes, and if they do hold, the report can still stand despite the conflict.

Right 3

Then let us keep the concern tied to trust and evidence, not turn it into a personal dismissal.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
--------------------------------------	--	--	---	---------------------------------------

Part I - Dialogue assessment items

Assessment Item 18 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

Given the legal deadline and the two proposals still on the table, the board probably has to choose between plan A and plan B tonight.

Right 1

That sounds like a real short-term constraint, not a claim that those are the only options in principle.

Left 2

Right. In theory there were more options months ago, but at this stage those have already dropped out procedurally.

Right 2

Then the narrow choice is coming from the situation, not from argumentative compression.

Left 3

Exactly. I would be making a stronger claim only if I said no other routes had ever been possible.

Right 3

Good; then the objection is about a real procedural limit, not about smuggling in a caricature.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 19 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The seismologists' recommendation carries weight here because the question is squarely within their expertise, though we should still look at the hazard model itself.

Right 1

That seems more careful than treating their status alone as a final verdict.

Left 2

Yes. Their expertise gives us a reason to start with their view, not a reason to stop examining the data.

Right 2

So authority is functioning as a defeasible guide, not a substitute for evidence.

Left 3

Exactly, and if the model turned out to be weak, their prestige would not rescue it.

Right 3

Then the expert is being used for what she actually knows, not as a magic stamp.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
---	---	---	--	--

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 20 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The pilot program is analogous to a clinical trial only in one limited respect: both test a narrower version before scaling up.

Right 1

So you are not saying the policy process and medical science are identical.

Left 2

Not at all. The analogy is just meant to justify staged rollout, not to transfer every feature from one domain to the other.

Right 2

Then the conclusion is modest and tied to the relevant similarity.

Left 3

Exactly. If someone tried to import efficacy standards or consent rules wholesale, the analogy would be doing too much.

Right 3

So the low base rate stays in view instead of disappearing behind one dramatic detail.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
--------------------------------------	--	--	---	---------------------------------------

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 21 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

My own case is not proof that the new billing policy is harmful, but it is a reason to look more carefully at whether others were affected in the same way.

Right 1

That sounds like using the case as a lead rather than as a verdict.

Left 2

Exactly. I am saying it raises a question, not that one story settles the issue.

Right 2

Then the next step is to look for broader records and rates.

Left 3

Yes, because the anecdote can motivate inquiry even when it cannot carry the final conclusion.

Right 3

Fine, as long as the example stays an example and not a stand-in for the whole population.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
--------------------------------------	--	--	---	---------------------------------------

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 22 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The two variables move together, but I do not think that by itself justifies a causal claim.

Right 1

So you are treating the pattern as a clue rather than as a settled explanation.

Left 2

Exactly. We would still need timing, mechanism, and some way of addressing likely confounders.

Right 2

Then the correlation is being handled cautiously rather than inflated into cause.

Left 3

Right. It is enough to motivate a better study, not enough to close the case.

Right 3

Then we are treating uncertainty as uncertainty, not pretending it settles more than it does.

Mark one choice:

Part I - Dialogue assessment items

Assessment Item 23 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

Her reelection incentive does not refute the budget claim, but it does mean I want to inspect the numbers more carefully than I otherwise might.

Right 1

So motive matters here as a reason for caution, not as a replacement for analysis.

Left 2

Exactly. If the figures survive scrutiny, the claim may still be sound regardless of the incentive behind it.

Right 2

Then you are separating the reliability question from the truth question.

Left 3

Yes. Incentives can justify vigilance without acting as magical disproof.

Right 3

Good; then the motive point is just context unless it connects back to the reasoning itself.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal
--------------------------------------	--	--	---	---------------------------------------

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 24 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

People in 2007 did not have the same information we have now, so we should be careful about judging what they 'obviously' should have predicted.

Right 1

That is different from excusing them entirely; it just asks us to use the information frame they actually had.

Left 2

Right. Some warnings were available, but hindsight still makes the pattern look cleaner than it did at the time.

Right 2

So the caution is about not smuggling our later knowledge back into their decision setting.

Left 3

Exactly. The goal is historical fairness, not automatic absolution.

Right 3

Fair enough; then the quote is helping with context instead of twisting what was meant.

Mark one choice:

☐ Left Formal	☐ Left Informal	☐ No speaker None	☐ Right Informal	☐ Right Formal

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

The policy's long-run performance still looks mixed to me.

Right 1

Not if you look at the six counties that improved most after implementation.

Left 2

Why those six rather than the full state?

Right 2

Because they show what the policy can achieve when it is working properly.

Left 3

But the statewide record includes many counties moving the other way.

Right 3

Then maybe we should ask whether the rest of the counties tell the same story.

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 35 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

Either the outage came from a server fault or from user error.

Right 1

User error definitely occurred, so it was not a server fault.

Left 2

That would follow only if the two possibilities could not both be present.

Right 2

I took the either-or to settle that.

Left 3

But you have not shown that it was exclusive rather than merely listing live candidates.

Right 3

Why read 'either-or' as if the door had to close on the other side?

Part I - Dialogue assessment items

Assessment Item 36 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

All constitutional amendments require ratification.

Right 1

This municipal charter requires ratification, so it is a constitutional amendment.

Left 2

That only shows the charter shares one feature with amendments.

Right 2

A defining feature, though.

Left 3

Not necessarily a unique one.

Right 3

Requiring ratification narrows it a bit, but why think that feature belongs only to amendments?

Part I - Dialogue assessment items

Assessment Item 37 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

You know Dr. Singh, and Singh hates jargon in referee reports.

Right 1

The anonymous reviewer used quite a lot of jargon, so the reviewer was not Singh.

Left 2

That conclusion assumes that how you know Singh settles who the anonymous reviewer was.

Right 2

If Singh hates jargon, surely that is enough.

Left 3

It may bear on likelihood, but it does not settle identity.

Right 3

That tells us something about how you picture Singh, not necessarily about who wrote the report.

Mark one choice:

Reminder: there is at most one fallacy in the exchange, and some items contain none at all.

Part I - Dialogue assessment items

Assessment Item 38 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

If the patient had syndrome X, this biomarker profile would appear.

Right 1

The biomarker profile appeared, so the patient had syndrome X.

Left 2

Could the same profile appear under a different condition?

Right 2

Possibly, but the profile still matches syndrome X.

Left 3

Matching one condition does not prove no other condition could fit.

Right 3

Matching the profile matters, but does it point only to syndrome X?

Part I - Dialogue assessment items

Assessment Item 39 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

If the donor signs today, the restoration fund will clear by June.

Right 1

The donor did not sign today, so the fund cannot clear by June.

Left 2

That shows one path is blocked, not every path.

Right 2

It was the path we expected.

Left 3

Expected is not the same as necessary.

Right 3

Missing today's signature matters, but why turn that into impossibility?

Mark one choice:

Assessment Item 40 of 40

Read the full exchange, then decide whether the fallacy is on the left, on the right, or nowhere.

Left 1

No confidential documents are posted publicly.

Right 1

And no public documents require a security clearance, so all confidential documents require a security clearance.

Left 2

That conclusion feels imported rather than derived.

Right 2

Why? The two premises draw the boundary pretty sharply.

Left 3

They draw two negative boundaries, but they do not by themselves generate that affirmative conclusion.

Right 3

Those premises draw lines, yes, but where did the positive conclusion come from?

Part II - Correct answers and commentary

Answer Guide 1 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Affirming the consequent**Left 1**

If the dataset had been manipulated, the anomaly detector would have spiked.

Right 1

Possibly, though a detector spike can come from other disruptions too.

Left 2

It did spike last night.

Right 2

That certainly means something unusual happened.

Left 3

Then the dataset was manipulated.

Right 3

A spike narrows the field, but it does not name the culprit by itself.

Commentary

The left speaker moves from 'if the dataset was manipulated, the detector would spike' and 'the detector spiked' to 'therefore the dataset was manipulated.' That treats one possible sign as if it established the only possible cause.

LogFall reference: <https://logfall.com/fallacies/affirming-the-consequent/>

Part II - Correct answers and commentary

Answer Guide 2 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Denying the antecedent**Left 1**

If the Arctic grant is renewed, the field season goes ahead.

Right 1

Right, that would guarantee the trip.

Left 2

The grant was not renewed.

Right 2

So that route is closed.

Left 3

Then the field season cannot go ahead.

Right 3

Losing that grant hurts, but why think every other route is closed too?

Commentary

The left speaker assumes that because the grant was not renewed, the field season cannot occur. But the original conditional made renewal sufficient, not necessary.

LogFall reference: <https://logfall.com/fallacies/denying-the-antecedent/>

Answer Guide 3 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Affirming a disjunct

Left 1

Either the leak came from legal or from procurement.

Right 1

Those are two live possibilities, yes.

Left 2

Procurement definitely had access to the draft.

Right 2

That keeps procurement in the running.

Left 3

Then it wasn't legal.

Right 3

Why assume those two possibilities could not both be part of the story?

Commentary

The left speaker treats an 'either-or' claim as exclusive without showing that it is exclusive. From 'either legal or procurement leaked it' and 'procurement had access,' the speaker jumps to 'so it was not legal.'

LogFall reference: <https://logfall.com/fallacies/affirming-a-disjunct/>

Part II - Correct answers and commentary

Answer Guide 4 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Undistributed middle

Left 1

All tenure files are reviewed by the dean.

Right 1

Naturally.

Left 2

This fellowship dossier was reviewed by the dean yesterday.

Right 2

Yes, it was.

Left 3

Then it must be a tenure file.

Right 3

A dean reviews lots of things; why treat that as a unique fingerprint?

Commentary

The left speaker notes that all tenure files are reviewed by the dean and that this fellowship file was reviewed by the dean, then concludes it is a tenure file. Sharing one middle feature does not justify identity of type.

LogFall reference: <https://logfall.com/fallacies/undistributed-middle/>

Answer Guide 5 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Affirming the consequent

Left 1

If the archival script reran overnight, the timestamps would bunch together.

Right 1

That would be one way to get clustering.

Left 2

The timestamps are bunched together.

Right 2

So the log definitely changed somehow.

Left 3

Then the archival script reran overnight.

Right 3

Clustered timestamps tell us something happened, but why leap straight to that script?

Commentary

The left speaker infers the script reran from the fact that timestamps clustered, even though clustering could have other causes. The conditional sign is treated as if it proved the antecedent.

LogFall reference: <https://logfall.com/fallacies/affirming-the-consequent/>

Part II - Correct answers and commentary

Answer Guide 6 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Denying the antecedent**Left 1**

If the solvent had been contaminated, the varnish would have blistered.

Right 1

That would be a strong sign, yes.

Left 2

The varnish never blistered.

Right 2

So that sign is absent.

Left 3

Then the solvent was not contaminated.

Right 3

No blistering helps your case, but why treat one missing sign as the whole story?

Commentary

The left speaker reasons that because the contaminated-solvent condition is absent, contamination is impossible. But the argument only established one sufficient route to blistering, not the only route to contamination.

LogFall reference: <https://logfall.com/fallacies/denying-the-antecedent/>

Answer Guide 7 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Masked man fallacy

Left 1

The anonymous reviewer who attacked your method clearly misunderstood the archive.

Right 1

Maybe, though we still do not know who that reviewer was.

Left 2

You know Professor Hale, and Hale understands the archive extremely well.

Right 2

I agree with that much.

Left 3

So Hale could not have been the anonymous reviewer.

Right 3

Knowing Hale that way still does not tell us who was behind the anonymous review.

Commentary

The left speaker argues from a difference in known descriptions to a difference in identity. Knowing Professor Hale under one description does not settle whether Hale was the anonymous reviewer under another.

LogFall reference: <https://logfall.com/fallacies/masked-man-fallacy/>

Answer Guide 8 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Formal - Undistributed middle

Left 1

All indexed journals assign DOIs to their articles.

Right 1

Yes, that is common practice.

Left 2

This conference series assigns DOIs to its papers.

Right 2

It does.

Left 3

Then the conference series is indexed.

Right 3

Lots of publications assign DOIs; why think that settles the indexing question?

Commentary

The left speaker infers that the conference series is indexed because it shares the property of having DOIs with indexed journals. The middle term is never distributed broadly enough to support that conclusion.

LogFall reference: <https://logfall.com/fallacies/undistributed-middle/>

Answer Guide 9 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Ad hominem

Left 1

I do not see why we should take Mira's security warning seriously; she has never actually shipped a product.

Left 2

People who have never built anything always imagine disaster.

Left 3

If she were a serious engineer, maybe I would listen.

Right 1

Her work history might matter in some contexts, but what about the vulnerability she pointed out?

Right 2

That still leaves the exploit path itself unanswered.

Right 3

You still have not told me what is wrong with her numbers.

Commentary

The left speaker dismisses the security argument by attacking the critic's background rather than answering the merits of the warning. The target is the person, not the support for the claim.

LogFall reference: <https://logfall.com/fallacies/ad-hominem/>

Answer Guide 10 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - False dilemma

Left 1

Either we publish this semester or we admit the project was never worth doing.

Right 1

Could we revise and send it out next term instead?

Left 2

Delaying is just a slower way of conceding failure.

Right 2

It could also mean the argument needs one more round of evidence.

Left 3

No, the choice is really publish now or admit the whole effort collapsed.

Right 3

Why treat the choice as exhausted when other live options are still on the table?

Commentary

The left speaker compresses the options into publish-now or admit the project has no value, ignoring other live options such as revision, delay, or narrower publication.

LogFall reference: <https://logfall.com/fallacies/false-dilemma/>

Part II - Correct answers and commentary

Answer Guide 11 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Cherry picking**Left 1**

The initiative is clearly working; look at the jump in enrollment in March and April.

Right 1

Why only those two months rather than the whole year?

Left 2

Because those are the months after the rollout, and they show the effect cleanly.

Right 2

They also sit inside a year that otherwise trends downward.

Left 3

The important point is that the rollout produced two excellent quarters of evidence.

Right 3

Before we call it a recovery, should we not look at the quarters you left out?

Commentary

The left speaker highlights the two favorable quarters and treats them as decisive while the larger trend is being left offstage. The argument gains strength only by selective inclusion.

LogFall reference: <https://logfall.com/fallacies/cherry-picking/>

Part II - Correct answers and commentary

Answer Guide 12 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Appeal to authority**Left 1**

Three Nobel laureates signed the letter, so the proposed industrial policy must be sound.

Right 1

Their support is interesting, but what do the actual forecasts and models show?

Left 2

People at that level would not put their names on a weak policy.

Right 2

Distinguished people can still overreach outside the exact point at issue.

Left 3

I think their standing settles enough of the matter for practical purposes.

Right 3

Expertise matters, but where is the argument about this policy itself?

Commentary

The left speaker leans on the prestige of Nobel laureates as if that settled a technical policy question. Relevant expertise may matter, but authority cannot replace the underlying evidence and reasoning.

LogFall reference: <https://logfall.com/fallacies/appeal-to-authority/>

Part II - Correct answers and commentary

Answer Guide 13 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Red herring**Left 1**

Before we talk about the overrun, remember how dedicated the museum staff have been during the renovation.

Right 1

I do appreciate their dedication, but the question was about the missing 1.2 million.

Left 2

That kind of commitment is why the public trusts this institution.

Right 2

Trust and dedication are still not an accounting explanation.

Left 3

My point is that no one here has lacked seriousness or love for the mission.

Right 3

Maybe, but I am still waiting for an answer to the budget question.

Commentary

The left speaker is asked about the budget overrun and replies with staff dedication and mission language. Those points may be favorable, but they do not answer the original issue under dispute.

LogFall reference: <https://logfall.com/fallacies/red-herring/>

Answer Guide 14 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Hasty generalization

Left 1

Two students in my section cheated during remote exams, so remote testing is inherently dishonest.

Right 1

That seems broader than the sample can support.

Left 2

It shows what the format invites once students are out of sight.

Right 2

It may show a real risk, but not what every remote exam amounts to.

Left 3

After seeing those two cases, I do not see why anyone would trust the whole format.

Right 3

Two ugly cases are not yet the same thing as a broad pattern.

Commentary

The left speaker generalizes from two observed cheating cases to the broad claim that remote exams are inherently dishonest. The sample is far too thin to support the conclusion's scope.

LogFall reference: <https://logfall.com/fallacies/hasty-generalization/>

Answer Guide 15 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - False equivalence

Left 1

Editing a paragraph after peer review and fabricating a dataset are basically the same sort of dishonesty; both involve changing the record.

Right 1

Both involve change, but not remotely at the same level.

Left 2

A manipulation is still a manipulation.

Right 2

That description is too thin to carry the equivalence you are claiming.

Left 3

Once you alter the text, the ethical line has already been crossed in the same way.

Right 3

A hospital and a household budget may rhyme in one respect, but do they work the same way where it matters?

Commentary

The left speaker collapses a major difference in seriousness by treating paragraph editing and dataset fabrication as basically the same because both alter text. The comparison flattens a crucial difference.

LogFall reference: <https://logfall.com/fallacies/false-equivalence/>

Answer Guide 16 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Left Informal - Appeal to motive

Left 1

The union representative only called the report unsafe because she wanted leverage before bargaining.

Left 2

People do not raise these alarms unless there is something to gain from them.

Left 3

I think the bargaining motive tells us enough about how seriously to take the report.

Right 1

That incentive might be worth keeping in mind, but what about the ventilation data she cited?

Right 2

Sometimes they do, but that still would not answer whether the data are sound.

Right 3

Possible incentives are worth noting, but what do they show about the report's actual case?

Commentary

The left speaker treats the union representative's motive as if it settled the safety report itself. Incentives may be worth noting, but they do not substitute for examining the underlying reasons and evidence.

LogFall reference: <https://logfall.com/fallacies/appeal-to-motive/>

Answer Guide 17 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None

Left 1

The consultant's undisclosed financial tie does not automatically refute the report, but it does mean we should verify the claims independently.

Right 1

That seems fair; the conflict affects how much trust we extend before checking the evidence.

Left 2

Exactly. I am not saying the report is false, only that the burden of independent confirmation is now higher.

Right 2

Then the relevant question becomes whether the numbers still hold once we audit them ourselves.

Left 3

Yes, and if they do hold, the report can still stand despite the conflict.

Right 3

Then let us keep the concern tied to trust and evidence, not turn it into a personal dismissal.

Commentary

No fallacy is committed. The speakers treat the consultant's financial tie as a reason for stricter scrutiny, not as an automatic refutation of the claim itself.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Answer Guide 18 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None

Left 1

Given the legal deadline and the two proposals still on the table, the board probably has to choose between plan A and plan B tonight.

Right 1

That sounds like a real short-term constraint, not a claim that those are the only options in principle.

Left 2

Right. In theory there were more options months ago, but at this stage those have already dropped out procedurally.

Right 2

Then the narrow choice is coming from the situation, not from argumentative compression.

Left 3

Exactly. I would be making a stronger claim only if I said no other routes had ever been possible.

Right 3

Good; then the objection is about a real procedural limit, not about smuggling in a caricature.

Commentary

No fallacy is committed. The speakers explicitly note that the institution faces a genuinely limited short-term choice under the deadline rather than pretending that all imaginable options have vanished forever.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Part II - Correct answers and commentary

Answer Guide 19 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None**Left 1**

The seismologists' recommendation carries weight here because the question is squarely within their expertise, though we should still look at the hazard model itself.

Right 1

That seems more careful than treating their status alone as a final verdict.

Left 2

Yes. Their expertise gives us a reason to start with their view, not a reason to stop examining the data.

Right 2

So authority is functioning as a defeasible guide, not a substitute for evidence.

Left 3

Exactly, and if the model turned out to be weak, their prestige would not rescue it.

Right 3

Then the expert is being used for what she actually knows, not as a magic stamp.

Commentary

No fallacy is committed. The speakers use expert judgment as provisional support while still appealing to the underlying evidence and domain-specific relevance.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Answer Guide 20 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None

Left 1

The pilot program is analogous to a clinical trial only in one limited respect: both test a narrower version before scaling up.

Right 1

So you are not saying the policy process and medical science are identical.

Left 2

Not at all. The analogy is just meant to justify staged rollout, not to transfer every feature from one domain to the other.

Right 2

Then the conclusion is modest and tied to the relevant similarity.

Left 3

Exactly. If someone tried to import efficacy standards or consent rules wholesale, the analogy would be doing too much.

Right 3

So the low base rate stays in view instead of disappearing behind one dramatic detail.

Commentary

No fallacy is committed. The analogy is offered as a limited comparison and the speaker explicitly marks the differences that might matter, which avoids the overreach of a false analogy.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Part II - Correct answers and commentary

Answer Guide 21 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None**Left 1**

My own case is not proof that the new billing policy is harmful, but it is a reason to look more carefully at whether others were affected in the same way.

Right 1

That sounds like using the case as a lead rather than as a verdict.

Left 2

Exactly. I am saying it raises a question, not that one story settles the issue.

Right 2

Then the next step is to look for broader records and rates.

Left 3

Yes, because the anecdote can motivate inquiry even when it cannot carry the final conclusion.

Right 3

Fine, as long as the example stays an example and not a stand-in for the whole population.

Commentary

No fallacy is committed. The anecdote is presented as a reason to investigate, not as if it were conclusive evidence for a broad claim.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Answer Guide 22 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None

Left 1

The two variables move together, but I do not think that by itself justifies a causal claim.

Right 1

So you are treating the pattern as a clue rather than as a settled explanation.

Left 2

Exactly. We would still need timing, mechanism, and some way of addressing likely confounders.

Right 2

Then the correlation is being handled cautiously rather than inflated into cause.

Left 3

Right. It is enough to motivate a better study, not enough to close the case.

Right 3

Then we are treating uncertainty as uncertainty, not pretending it settles more than it does.

Commentary

No fallacy is committed. The speakers note the correlation but explicitly refuse to treat it as causal without stronger design and controls.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Part II - Correct answers and commentary

Answer Guide 23 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None**Left 1**

Her reelection incentive does not refute the budget claim, but it does mean I want to inspect the numbers more carefully than I otherwise might.

Right 1

So motive matters here as a reason for caution, not as a replacement for analysis.

Left 2

Exactly. If the figures survive scrutiny, the claim may still be sound regardless of the incentive behind it.

Right 2

Then you are separating the reliability question from the truth question.

Left 3

Yes. Incentives can justify vigilance without acting as magical disproof.

Right 3

Good; then the motive point is just context unless it connects back to the reasoning itself.

Commentary

No fallacy is committed. The speaker treats the politician's incentive as a reason for closer checking, while explicitly refusing to let motive alone settle the substantive question.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Part II - Correct answers and commentary

Answer Guide 24 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: None

Left 1

People in 2007 did not have the same information we have now, so we should be careful about judging what they 'obviously' should have predicted.

Right 1

That is different from excusing them entirely; it just asks us to use the information frame they actually had.

Left 2

Right. Some warnings were available, but hindsight still makes the pattern look cleaner than it did at the time.

Right 2

So the caution is about not smuggling our later knowledge back into their decision setting.

Left 3

Exactly. The goal is historical fairness, not automatic absolution.

Right 3

Fair enough; then the quote is helping with context instead of twisting what was meant.

Commentary

No fallacy is committed. The speakers insist on judging past actors in light of the information available to them at the time, which avoids rather than commits the Historian's Fallacy.

LogFall reference: No fallacy page is linked here because this dialogue is a control item with no fallacy.

Part II - Correct answers and commentary

Answer Guide 25 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Ad hominem**Left 1**

Professor Lin thinks the new contract language is vulnerable under labor law.

Right 1

Lin has spent a career in seminar rooms, so I am not taking his contract reading seriously.

Left 2

That says something about his biography, not yet about the interpretation.

Right 2

People who have never managed a real payroll should not lecture firms on contract risk.

Left 3

But the question was whether the clause survives judicial review.

Right 3

Then let us go back to the clause itself and see whether it can carry the claim.

Commentary

The right speaker dismisses the labor-law argument by attacking the professor's career background instead of answering the legal reasoning offered.

LogFall reference: <https://logfall.com/fallacies/ad-hominem/>

Answer Guide 26 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - False dilemma

Left 1

I am worried the surveillance proposal sweeps too broadly.

Right 1

Then you must prefer leaving the city unprotected.

Left 2

I might prefer a narrower policy, not no policy.

Right 2

In practice it is really one or the other: comprehensive monitoring or chaos.

Left 3

That seems to leave out several live intermediate designs.

Right 3

So maybe the choice is not as boxed-in as you first made it sound.

Commentary

The right speaker compresses the issue into either accepting the surveillance proposal or choosing lawlessness. That excludes live middle positions such as partial adoption, narrower scope, or other safeguards.

LogFall reference: <https://logfall.com/fallacies/false-dilemma/>

Answer Guide 27 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Cherry picking

Left 1

The policy's long-run performance still looks mixed to me.

Right 1

Not if you look at the six counties that improved most after implementation.

Left 2

Why those six rather than the full state?

Right 2

Because they show what the policy can achieve when it is working properly.

Left 3

But the statewide record includes many counties moving the other way.

Right 3

Then maybe we should ask whether the rest of the counties tell the same story.

Commentary

The right speaker relies on a small favorable slice of the evidence while ignoring the broader pattern that qualifies or weakens the conclusion.

LogFall reference: <https://logfall.com/fallacies/cherry-picking/>

Part II - Correct answers and commentary

Answer Guide 28 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Appeal to authority**Left 1**

I am still unsure that the architecture really solves the scaling problem.

Right 1

The founder of the largest platform in the sector endorsed it, so that doubt is basically settled.

Left 2

Her view may matter, but what about the benchmarks?

Right 2

Someone at that level has already done the thinking for us.

Left 3

That sounds stronger than the public evidence justifies.

Right 3

That endorsement may matter, but it still does not do the arguing for us.

Commentary

The right speaker treats the famous founder's endorsement as if it settled the technology claim. Prestige is doing evidential work the argument itself has not earned.

Answer Guide 29 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Red herring

Left 1

Did the procurement office waive the normal bid requirements on this contract?

Right 1

Before we get lost in paperwork, remember how much this hospital has done for the region.

Left 2

Its public service record is admirable, but the question was about the bidding procedure.

Right 2

People here have saved thousands of lives over the past decade.

Left 3

That does not tell us whether the bid was handled properly.

Right 3

Then let us return to the safety question instead of wandering into the mayor's record.

Commentary

The right speaker responds to a question about procurement irregularities by shifting to the institution's public service record. That may be flattering, but it does not answer the issue raised.

LogFall reference: <https://logfall.com/fallacies/red-herring/>

Answer Guide 30 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Hasty generalization

Left 1

One vendor botched the payroll rollout badly, but I am not sure that tells us about the whole industry.

Right 1

After a disaster like that, it is obvious municipal software vendors are all unreliable.

Left 2

That sounds broader than the case can support.

Right 2

You only need one clear example to see the type.

Left 3

Not if the claim is about the whole field rather than about one contractor.

Right 3

Then the next question is whether that small sample can really bear that much weight.

Commentary

The right speaker extrapolates from one disastrous rollout to a broad claim about all municipal software vendors. The conclusion outruns the evidence base.

LogFall reference: <https://logfall.com/fallacies/hasty-generalization/>

Answer Guide 31 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - False equivalence

Left 1

The dean altered the citation format after the final proof, which was sloppy but not the same as inventing sources.

Right 1

Changing citations and inventing sources are basically equivalent because both modify the scholarly record.

Left 2

Both modify the record, but that does not make them equivalent in kind.

Right 2

Once the record is touched, the ethical distinction collapses.

Left 3

That seems to flatten a major difference for the sake of a clean slogan.

Right 3

Shared labels are easy; the harder question is whether the relevant structure matches too.

Commentary

The right speaker equates two acts that share a superficial property but differ sharply in seriousness and evidential meaning. The comparison erases a relevant difference rather than confronting it.

LogFall reference: <https://logfall.com/fallacies/false-equivalence/>

Answer Guide 32 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Informal - Slippery slope

Left 1

I am open to a limited pilot for AI-assisted grading so long as we keep humans in the loop.

Left 2

That is a long chain; what makes those later steps inevitable?

Left 3

I still do not hear the mechanism that connects this pilot to the final outcome.

Right 1

The moment you allow that pilot, the next stop is fully automated grading and eventually automated admissions.

Right 2

That is simply how these things always go once the first exception is made.

Right 3

Then show me why each step follows, not just why the ending sounds alarming.

Commentary

The right speaker projects from a modest first move to an extreme later outcome without supplying the intervening steps or constraints. The slide is asserted rather than argued for.

LogFall reference: <https://logfall.com/fallacies/slippy-slope/>

Answer Guide 33 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Affirming the consequent

Left 1

If the archive were forged, the ink test would fail.

Right 1

The ink test failed, so the archive was forged.

Left 2

Could the ink test fail for any reason other than forgery?

Right 2

Perhaps, but the conditional already gives us the answer.

Left 3

No, it gives one route to failure, not the only route.

Right 3

A failed ink test is suggestive, but why treat it as a signed confession?

Commentary

The right speaker reasons from the presence of a sign back to one particular cause, even though the conditional only made that cause sufficient, not necessary.

LogFall reference: <https://logfall.com/fallacies/affirming-the-consequent/>

Answer Guide 34 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Denying the antecedent

Left 1

If the merger goes through, layoffs follow.

Right 1

The merger did not go through, so layoffs are off the table.

Left 2

That only rules out one route to layoffs.

Right 2

It rules out the route we identified in advance.

Left 3

Yes, but not every possible route.

Right 3

Blocking that path matters, but why think it was the only road to layoffs?

Commentary

The right speaker infers that layoffs cannot happen because the merger did not go through. But the original claim only said the merger would be enough to produce layoffs, not that layoffs required it.

LogFall reference: <https://logfall.com/fallacies/denying-the-antecedent/>

Answer Guide 35 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Affirming a disjunct

Left 1

Either the outage came from a server fault or from user error.

Right 1

User error definitely occurred, so it was not a server fault.

Left 2

That would follow only if the two possibilities could not both be present.

Right 2

I took the either-or to settle that.

Left 3

But you have not shown that it was exclusive rather than merely listing live candidates.

Right 3

Why read 'either-or' as if the door had to close on the other side?

Commentary

The right speaker treats a disjunction as exclusive without showing that exclusivity. From 'either server fault or user error' and 'user error occurred,' the speaker infers 'therefore not server fault.'

LogFall reference: <https://logfall.com/fallacies/affirming-a-disjunct/>

Part II - Correct answers and commentary

Answer Guide 36 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Undistributed middle

Left 1

All constitutional amendments require ratification.

Right 1

This municipal charter requires ratification, so it is a constitutional amendment.

Left 2

That only shows the charter shares one feature with amendments.

Right 2

A defining feature, though.

Left 3

Not necessarily a unique one.

Right 3

Requiring ratification narrows it a bit, but why think that feature belongs only to amendments?

Commentary

The right speaker infers that the charter is a constitutional amendment because both it and amendments require ratification. Sharing a middle property is not enough.

LogFall reference: <https://logfall.com/fallacies/undistributed-middle/>

Part II - Correct answers and commentary

Answer Guide 37 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Masked man fallacy**Left 1**

You know Dr. Singh, and Singh hates jargon in referee reports.

Right 1

The anonymous reviewer used quite a lot of jargon, so the reviewer was not Singh.

Left 2

That conclusion assumes that how you know Singh settles who the anonymous reviewer was.

Right 2

If Singh hates jargon, surely that is enough.

Left 3

It may bear on likelihood, but it does not settle identity.

Right 3

That tells us something about how you picture Singh, not necessarily about who wrote the report.

Commentary

The right speaker infers a difference in identity from a difference in how the person is known. Knowledge under one description does not settle identity under another.

LogFall reference: <https://logfall.com/fallacies/masked-man-fallacy/>

Answer Guide 38 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Affirming the consequent

Left 1

If the patient had syndrome X, this biomarker profile would appear.

Right 1

The biomarker profile appeared, so the patient had syndrome X.

Left 2

Could the same profile appear under a different condition?

Right 2

Possibly, but the profile still matches syndrome X.

Left 3

Matching one condition does not prove no other condition could fit.

Right 3

Matching the profile matters, but does it point only to syndrome X?

Commentary

The right speaker infers disease X from a biomarker that can appear in several conditions. The argument treats one indicative consequence as a unique identifier.

LogFall reference: <https://logfall.com/fallacies/affirming-the-consequent/>

Part II - Correct answers and commentary

Answer Guide 39 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Denying the antecedent

Left 1

If the donor signs today, the restoration fund will clear by June.

Right 1

The donor did not sign today, so the fund cannot clear by June.

Left 2

That shows one path is blocked, not every path.

Right 2

It was the path we expected.

Left 3

Expected is not the same as necessary.

Right 3

Missing today's signature matters, but why turn that into impossibility?

Commentary

The right speaker treats the failure of one enabling condition as if it made the outcome impossible. The conditional did not support that stronger conclusion.

LogFall reference: <https://logfall.com/fallacies/denying-the-antecedent/>

Answer Guide 40 of 40

Use the diagnosis and commentary below to see exactly why this dialogue counts as left formal, left informal, none, right informal, or right formal.

Correct diagnosis: Right Formal - Exclusive premises

Left 1

No confidential documents are posted publicly.

Right 1

And no public documents require a security clearance, so all confidential documents require a security clearance.

Left 2

That conclusion feels imported rather than derived.

Right 2

Why? The two premises draw the boundary pretty sharply.

Left 3

They draw two negative boundaries, but they do not by themselves generate that affirmative conclusion.

Right 3

Those premises draw lines, yes, but where did the positive conclusion come from?

Commentary

The right speaker tries to derive a positive conclusion from two negative premises. The structure does not support that affirmative result.

LogFall reference: <https://logfall.com/fallacies/exclusive-premises/>
